MoonLab Poster Palette

`iiserb` color theme

Multi-Robot Autonomy Lab, IISER Bhopal

Core palette

	Name	HEX	RGB
	Space Indigo	`2B2D42`	`43, 45, 66`
	Glaucous	`6A7FDB`	`106, 127, 219`
	Bubblegum Pink	`E76B74`	`231, 107, 116`
	Lemon Chiffon	`FBF2C0`	`251, 242, 192`
	Emerald	`51D87E`	`81, 216, 126`

Derived tints (defined in the theme file)

	Name	Mix
	glaucouslight	`glaucous!12!white` (example-block fill)
	lemonlight	`lemonchiffon!35!white` (alert-block fill)
	pinkdark	`bubblegum!75!spaceindigo` (pink text, if ever needed)
	glaucousdark	`glaucous!70!spaceindigo` (links, small text)
	emeralddark	`emerald!70!spaceindigo` (emerald text, if ever needed)
	offwhite	`FAFAFC` (reserved)

How to use the palette (keep it cohesive)

Aim for roughly: **white 60% / indigo 25% / glaucous 10% / pink + lemon + emerald under 5%**.

Space Indigo — the workhorse. Headline bar, block titles, headings, bullets, plot axes, and the primary data series. The only dark color, so it carries all text-like duties on white.

White — the default. Every block body. Do not tint body backgrounds; print readability and contrast come first.

Glaucous — the single recurring accent. Headline rule, block separators, example-block fills (12% tint only), secondary plot elements.

Bubblegum Pink — one highlight, used once. The thin alert-block separator and at most one contrasting plot series. Never a large fill, never body text on white (use `pinkdark` if pink text is unavoidable).

Lemon Chiffon — tint only. Alert-block fill as a 35% tint; never lines or text on white — it is too light to read. The one exception is footer links on the dark indigo bar, where full-strength lemon is readable.

Emerald — figures only. A contrasting data series against indigo (e.g. pink vs. emerald, or the two blues vs. one accent). Never large fills, never body text on white (use `emeralddark` if emerald text is unavoidable).

Do

- Pair one dark series with accent series per figure (`spaceindigo` vs `bubblegum`, `spaceindigo` vs `emerald`, or the two blues `spaceindigo` + `glaucousdark` against one accent); use `thick` / `ultra thick` lines and a legend — posters are read from metres away.
- Let the single pink element mark the single most important takeaway.
- Keep tables black-on-white with `booktabs` rules.

Don't

- Introduce extra colors (no pure `red`/`blue`/`green` plot defaults — the template's placeholders already use theme colors).
- Use more than 4 series per plot (and always add a legend beyond 2 series), or pink and lemon in the same figure.
- Put lemon text on white, or white text anywhere except the indigo bars.
